

Nature's force field

Biflex

**NO BETTER
TERMITE TREATMENT**

If termites come anywhere near your home, they'll be pushing up daisies.

The inspiration for Biflex came from a fresh field of daisies. Biflex is a synthetic pyrethroid modelled on nature's very own insecticide 'pyrethrum' and Mother Nature would be well pleased with our creation... a repellent termite treatment that is absolutely effective and simple.

Biflex Termiticide quickly kills any termite that it comes in contact with it. It also creates a protective force field around your home that WILL keep termites out.

Which is great to know because termites can cause massive structural damage that is both expensive and extremely disruptive to your home life.

Biflex active ingredient is bifentrin which is modelled on mother nature's very own, and very effective insecticide, the Pyrethrum Daisy

How Biflex creates an impenetrable perimeter barricade.

Biflex is applied externally, around the walls and footings of a home using either an injection or trenching method. If your home is surrounded by concrete, holes will be drilled to allow Biflex to be injected directly into the soil. Alternatively a narrow trench can be dug around your home which is flooded with a Biflex solution then filled back in. Termites that try to cross or burrow through the Biflex treated zone will quickly die.

Biflex has also been thoroughly and independently tested in termite infested areas and is now relied upon by over 1 million Australian homeowners to protect their homes against termites.

Biflex has been approved by the Australian Pesticides and Veterinary Medicines Authority.

Our commitment to you.

FMC, in partnership with your termite specialist, are committed 100% to effectively control your termite problems, without disruption to your life and with the utmost consideration to you and the environment we share and enjoy with our family and friends.

Use only as directed.

The application of Biflex must always be carried out by a licenced pest manager and only used as directed.

Biflex is both economically and eco wise.

Biflex has a low dose rate, yet it still provides the longest protection period of any termiticide on the Australian market. Biflex is insoluble in the soil, so it stays where it's needed and will not be leached away by rainfall or watering.

Tried, tested and trusted for total peace of mind.

There are no barriers to using Biflex.

Biflex brings real peace of mind protection with the knowledge that it will not create health concerns for you, your family or your pets.

The Biflex logo consists of the word "Biflex" in a bold, green, sans-serif font. To the right of the text is a red diamond shape with a white outline, tilted slightly to the right.
